Experience

- Backend Developer** | Helmer — Client: TipTop Restaurant Apr 2025
- Built a **Node.js/Express.js RESTful API** with JWT auth and role-based access for customer, admin, and delivery roles; designed **MongoDB** schema for menus, orders, and deliveries with real-time status updates.
 - Optimised API response times by **35%** through query indexing, payload compression, and server-side caching; integrated third-party services for bookings and automated notifications, reducing manual order processing by **40%**.
 - Designed scalable server architecture supporting end-to-end order lifecycle management across customer ordering, admin oversight, and delivery tracking workflows.
- Backend Developer** | Helmer — Client: Baliram Laundry Mar 2025
- Built a **Firebase**-backed server architecture handling customer bookings, live order tracking, and admin order management for **500+ active users**, reducing support calls by **30%**.
 - Designed Firestore data models and security rules to enforce role-based read/write access across customer, admin, and owner roles.
 - Implemented real-time listeners for order status propagation, eliminating polling overhead and improving data consistency across client sessions.

Projects

- Transportation Data Collection & Visualization Platform** | SIH 2025 | Link Sep 2025
- Architected a **Node.js + Express.js** REST API backend handling data ingestion from **500+ concurrent citizen users**, with role-based endpoints for citizens, owners, and scientists.
 - Designed a **MongoDB** schema for **10,000+ trip records** with geospatial indexing for polygon-based spatial queries and OD matrix generation; built server-side aggregation pipelines for temporal, demographic, and mode-purpose analysis.
 - Stack: **Node.js, Express.js, MongoDB, React.js, React Native, Leaflet**
- CodeBuddy – Group Coding Platform** | Link Jan 2025
- Built a **Node.js** backend with **WebSocket** support for real-time code synchronisation across **10+ concurrent users per session**; managed session state and conflict resolution server-side.
 - Designed **MongoDB** schema for users, problems, and sessions; built an AI-powered tagging pipeline classifying **200+ problems** by difficulty and topic, with REST APIs for auth and analytics serving **50+ users**.
 - Stack: **Node.js, Express.js, MongoDB, WebSockets, REST APIs**

Technologies

Backend: Node.js, Express.js, REST APIs, WebSockets, Firebase, JWT Authentication, Role-Based Access Control, MVC Architecture, API Rate Limiting, Input Validation, Error Handling, Logging, SQL, PostgreSQL, MySQL, MongoDB, Mongoose, Redis

DevOps & Tools: Git, GitHub, CI/CD, Postman, Docker, Linux, Environment Config (.env), Unit Testing, Jest

Frontend & Other: JavaScript (ES6+), TypeScript, React.js, HTML5, Java, OOP, Data Structures & Algorithms, System Design

Certifications

- Approximation Algorithms and Linear Programming** — Coursera Apr 2025
Studied LP duality, optimisation strategies, and approximation techniques | Link
- Security and Privacy in Online Social Media** — NPTEL May 2024
Explored security mechanisms, privacy frameworks, and attack detection in social platforms | Link

Achievements

Runner-Up, Smart India Hackathon (SIH) 2025: Delivered a full-stack transport data platform under competition constraints, recognised at the national internal selection round.

Education

- Lovely Professional University**, B.Tech in Computer Science | CGPA: 7.0 Oct 2022 – Present
Relevant coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP
- Mother's International Academy**, Science | 79% Oct 2019 – Jul 2021
